File: /Users/pranaygoud/Documents/CCTV-backend/ADMIN_ROLE_IMPLEMENTATION.md

Admin Role Implementation Summary

Overview

Successfully implemented **admin role restriction** for the Admin Settings panel. Only the designated admin user (`anuragnarsingoj@gmail.com`) can now see and modify:

- Default model selection (Gemini vs Local)
- Gemini API key management

What Was Implemented

Frontend Changes

1. Admin Check Utility

File: `nithya-analysis/lib/adminCheck.ts`

Created a utility function to check if a user is an admin:

```

``typescript
const ADMIN_EMAILS = [
  'anuragnarsingoj@gmail.com'
];

export const isAdmin = (email: string | undefined | null): boolean => {
  if (!email) return false;
  return ADMIN_EMAILS.includes(email.toLowerCase());
};

```

Features:

- Centralized admin email list
- Case-insensitive email matching
- Easy to add more admins in the future

2. Updated Settings Page

File: nithya-analysis/pages/SettingsPage.tsx

Changes Made:

1. Added Supabase auth integration
2. Fetch current user's email from session
3. Check if user is admin using isAdmin() function
4. Conditionally render admin panel only for admins

Code Flow:

```
// 1. Fetch user session
useEffect(() => {
  const checkAdminStatus = async () => {
    const { data: { session } } = await supabase.auth.getSession();
    if (session?.user?.email) {
      setUserEmail(session.user.email);
      setIsUserAdmin(isAdmin(session.user.email));
    }
  };
  checkAdminStatus();
}, []);

// 2. Only fetch admin settings if user is admin
useEffect(() => {
  if (isUserAdmin) {
    fetchAdminSettings();
  }
}, [isUserAdmin]);

// 3. Conditionally render admin panel
{isUserAdmin && (
  <motion.div>
    {/* Admin Settings Panel */}
  </motion.div>
)}
```

Backend Changes

1. Admin Auth Middleware

File: src/middleware/adminAuth.ts

Created middleware for future admin authorization:

```
const ADMIN_EMAILS = [  
  'anuragnarsingoj@gmail.com'  
];  
  
export const requireAdmin = (req, res, next) => {  
  // TODO: Implement JWT verification  
  // Currently allows all requests (frontend handles restriction)  
  next();  
};
```

Status: Placeholder implementation

- Frontend currently handles all admin checks
- Backend middleware ready for future JWT verification
- Can be enabled when Supabase JWT verification is added

2. Updated Settings Routes

File: src/routes/settingsRoutes.ts

Added comments and TODOs for future admin middleware:

```
// TODO: Enable when JWT auth is implemented  
// import { requireAdmin } from '../middleware/adminAuth';  
  
// TODO: Add admin middleware  
router.get('/settings', getSettings);  
router.put('/settings', updateSettings);
```

Security Implementation

Current Security (Frontend-Only)

Level: Medium

Protection: UI-level restriction

1. Admin Panel Visibility

- Only shown to anuragnarsingoj@gmail.com
- Checked via Supabase session
- Non-admins cannot see the panel at all

2. API Calls

- Settings API endpoints are still publicly accessible
- Frontend prevents non-admins from making calls
- Relies on UI restriction

Future Security (Backend Protection)

Level: High

Protection: API-level restriction

To enable full backend protection:

1. Implement JWT Verification

```
import { requireAdmin } from '../middleware/adminAuth';

router.get('/settings', requireAdmin, getSettings);
router.put('/settings', requireAdmin, updateSettings);
```

2. Verify Supabase JWT

- Extract JWT from Authorization header
- Verify token with Supabase
- Extract user email from token
- Check against ADMIN_EMAILS list
- Return 403 if not admin

3. Example Implementation

```
export const requireAdmin = async (req, res, next) => {
  const authHeader = req.headers.authorization;
  if (!authHeader) {
    return res.status(401).json({
      success: false,
      message: 'Unauthorized'
    });
  }

  // Verify JWT with Supabase
  const token = authHeader.replace('Bearer ', '');
  const { data, error } = await supabase.auth.getUser(token);

  if (error || !data.user) {
    return res.status(401).json({
      success: false,
      message: 'Invalid token'
    });
  }

  // Check if user is admin
  if (!ADMIN_EMAILS.includes(data.user.email.toLowerCase())) {
    return res.status(403).json({
      success: false,
      message: 'Admin access required'
    });
  }

  next();
};
```

Admin User Management

Current Admin

- **Email:** anuragnarsingoju@gmail.com
- **Access:** Full admin privileges

Adding More Admins

To add more admin users in the future:

Frontend:

```
// File: nithya-analysis/lib/adminCheck.ts
const ADMIN_EMAILS = [
  'anuragnarsingoju@gmail.com',
  'newadmin@example.com', // Add here
  'anotheradmin@example.com'
];
```

Backend:

```
// File: src/middleware/adminAuth.ts
const ADMIN_EMAILS = [
  'anuragnarsingoju@gmail.com',
  'newadmin@example.com', // Add here
  'anotheradmin@example.com'
];
```

Future: Database-Driven Admin List

For better scalability, consider moving admin list to database:

```
CREATE TABLE admin_users (
  id SERIAL PRIMARY KEY,
  email VARCHAR(255) UNIQUE NOT NULL,
  created_at TIMESTAMP DEFAULT CURRENT_TIMESTAMP
);

INSERT INTO admin_users (email) VALUES ('anuragnarsingoju@gmail.com');
```

User Experience

For Admin Users (anuragnarsingoju@gmail.com)

Settings Page View:

Settings	
Admin Settings	[ADMIN ONLY]
Default Analysis Model	
[Gemini AI]	[Local Model]
Gemini API Key	
[AlzaSyDO9B*** ✓ Configured]	
[Password input...]	
[Save Admin Settings]	
General Settings	
[Auto-save analysis]	[Toggle]
[Notifications]	[Toggle]
...	

For Regular Users

Settings Page View:

Settings	
General Settings	
[Auto-save analysis]	[Toggle]
[Notifications]	[Toggle]
Video Processing	
[Analysis Quality]	[Dropdown]
Appearance	
[Theme]	[Light/Dark]
[Language]	[Dropdown]
[Save Settings]	[Reset to Defaults]

Note: Admin Settings panel is completely hidden for non-admin users.

Testing

Manual Testing Checklist

As Admin User (anuragnarsingoj@gmail.com):

- [x] Login with admin email
- [x] Navigate to Settings page
- [x] Verify Admin Settings panel is visible
- [x] Can see "ADMIN ONLY" badge
- [x] Can toggle between Gemini and Local model
- [x] Can see API key preview if configured
- [x] Can enter new API key
- [x] Can save admin settings
- [x] See success message after save
- [x] Settings persist after page refresh

As Regular User (any other email):

- [x] Login with non-admin email
- [x] Navigate to Settings page
- [x] Verify Admin Settings panel is NOT visible
- [x] Can still see and use General Settings
- [x] Can still see and use Video Processing settings
- [x] Can still see and use Appearance settings

Test Commands

Check admin status in browser console:

```
// After logging in
const { data: { session } } = await supabase.auth.getSession();
console.log('User email:', session.user.email);
console.log('Is admin:', session.user.email === 'anuragnarsingoj@gmail.com');
```

Implementation Status

Feature	Status	Notes
Frontend admin check	Complete	Using Supabase auth
Admin panel visibility	Complete	Conditional rendering
Admin email list	Complete	Hardcoded in code
Backend middleware	Placeholder	Ready for JWT verification
API protection	Partial	Frontend-only currently
JWT verification	⌚ Pending	Future enhancement
Database admin list	⌚ Pending	Future enhancement

Migration Path

No database migration required for this feature!

The admin check is purely code-based:

- Frontend: Checks email from Supabase session
- Backend: Placeholder middleware (not enforced yet)

Code Locations

Frontend

```
nithya-analysis/  
├── lib/  
│   └── adminCheck.ts    # Admin check utility  
└── pages/  
    └── SettingsPage.tsx  # Updated with admin check
```

Backend

```
src/  
├── middleware/  
│   └── adminAuth.ts      # Admin middleware (placeholder)  
└── routes/  
    └── settingsRoutes.ts  # Updated with TODOs
```

Future Enhancements

Short Term

1. Add More Admins

- Simply add emails to ADMIN_EMAILS array
- Update both frontend and backend

2. Admin Badge in UI

- Show admin badge in profile/header
- Visual indicator of admin status

Medium Term

1. Backend JWT Verification

- Implement Supabase JWT verification
- Enable requireAdmin middleware
- Full API-level protection

2. Admin Activity Log

- Log all admin actions
- Track settings changes
- Audit trail for security

Long Term

1. Database-Driven Admin List

- Move admin list to database
- Admin management UI
- Add/remove admins dynamically

2. Role-Based Access Control (RBAC)

- Multiple admin levels
- Granular permissions
- Feature-specific access control

Known Limitations

1. Frontend-Only Protection

- API endpoints not protected yet
- Relies on UI restriction
- Can be bypassed with direct API calls

2. Hardcoded Admin List

- Requires code change to add admins
- Not dynamic
- No admin management UI

3. No Audit Trail

- No logging of admin actions
- Can't track who changed what
- No accountability

Security Recommendations

Immediate

1. Frontend admin check implemented
2. Admin panel hidden from non-admins
3. API key masking in place

Short Term

1. ☒ Implement backend JWT verification
2. ☒ Enable requireAdmin middleware
3. ☒ Add rate limiting to settings endpoints

Long Term

1. ☒ Move to database-driven admin list
2. ☒ Add admin activity logging
3. ☒ Implement RBAC system
4. ☒ Add 2FA for admin accounts

Implementation Date: 2026-01-12

Admin User: anuragnarsingoj@gmail.com

Status: Complete (Frontend Protection)

Next Steps: Implement backend JWT verification

```
### File: `/Users/pranaygoud/Documents/CCTV-backend/README.md`
```

```
```md
```

```
Nithya Analysis Backend
```

Backend API for analyzing dance videos using Google Gemini AI and PostgreSQL.

```
Features
```

- **Video Upload**: Accept video files via multipart/form-data
- **AI Analysis**: Analyze videos using Google Gemini 1.5 Flash/Pro
- **Database Storage**: Store videos and analysis results in PostgreSQL
- **History**: Retrieve analysis history for frontend display
- **RESTful API**: Clean, documented API endpoints

```
Prerequisites
```

- **Node.js** 18+ and npm
- **PostgreSQL** 17 (or compatible version)
- **Google Gemini API Key** (Get from [Google AI Studio](https://makersuite.google.com/app/apikey))

```
Setup Instructions
```

```
1. Install PostgreSQL
```

```
macOS:
```

```
```bash
```

```
brew install postgresql@17
```

```
brew services start postgresql@17
```

Windows/Linux:

Download from [postgresql.org \(https://www.postgresql.org/download/\)](https://www.postgresql.org/download/)

2. Create Database

```
# Access PostgreSQL
```

```
psql postgres
```

```
# Create database
```

```
CREATE DATABASE nithya_analysis;
```

```
# Create user (optional)
```

```
CREATE USER nithya_user WITH PASSWORD 'your_secure_password';
```

```
# Grant privileges
```

```
GRANT ALL PRIVILEGES ON DATABASE nithya_analysis TO nithya_user;
```

```
# Exit
```

```
\q
```

3. Run Database Schema

```
# Run the schema file to create tables
psql -U postgres -d nithya_analysis -f database/schema.sql

# Or if you created a user:
psql -U nithya_user -d nithya_analysis -f database/schema.sql
```

4. Configure Environment Variables

Edit the .env file:

```
PORT=5005
NODE_ENV=development

# PostgreSQL Database
DB_HOST=localhost
DB_PORT=5432
DB_NAME=nithya_analysis
DB_USER=postgres
DB_PASSWORD=your_password_here

# Google Gemini API
GEMINI_API_KEY=your_gemini_api_key_here
```

Get Gemini API Key:

1. Go to [Google AI Studio \(https://makersuite.google.com/app/apikey\)](https://makersuite.google.com/app/apikey)
2. Create a new API key
3. Copy and paste into .env

5. Install Dependencies

```
npm install
```

6. Start the Server

Development mode (with auto-reload):

```
npm run dev
```

Production mode:

```
npm run build
npm start
```

The server will start on <http://localhost:5005>

API Endpoints

POST /getanalysis

Upload and analyze a video

Request:

- Method: POST
- Content-Type: multipart/form-data
- Body:
 - video: Video file (required)
 - prompt: Custom analysis prompt (optional)

Example using curl:

```
curl -X POST http://localhost:5005/getanalysis \  
-F "video=@/path/to/dance-video.mp4"
```

Example with custom prompt:

```
curl -X POST http://localhost:5005/getanalysis \  
-F "video=@/path/to/dance-video.mp4" \  
-F "prompt=Focus on identifying Bharatanatyam mudras"
```

Response:

```
{  
  "success": true,  
  "message": "Video analysis completed successfully",  
  "data": {  
    "id": 1,  
    "video_filename": "dance-video.mp4",  
    "status": "completed",  
    "gemini_response": {  
      "analysis": {  
        "danceForm": "Bharatanatyam",  
        "movements": [...],  
        "mudras": [...],  
        "rating": 8.5  
      }  
    },  
    "created_at": "2026-01-05T18:00:00Z"  
  }  
}
```

GET /history

Get analysis history

Query Parameters:

- status: Filter by status (pending, processing, completed, failed)
- limit: Number of results (default: 50)
- offset: Pagination offset (default: 0)

Example:

```
curl http://localhost:5005/history?status=completed&limit=10
```

Response:

```
{
  "success": true,
  "count": 10,
  "data": [...]
}
```

GET /analysis/:id

Get specific analysis by ID

Example:

```
curl http://localhost:5005/analysis/1
```

DELETE /analysis/:id

Delete analysis and video file

Example:

```
curl -X DELETE http://localhost:5005/analysis/1
```

GET /health

Health check endpoint

```
curl http://localhost:5005/health
```

Project Structure

```
nithya-analysis-backend/
├── database/
│   └── schema.sql      # PostgreSQL database schema
├── src/
│   ├── config/
│   │   ├── database.ts  # Database connection pool
│   │   └── multer.ts    # File upload configuration
│   ├── controllers/
│   │   └── analysisController.ts # Request handlers
│   ├── middleware/
│   │   └── errorHandler.ts # Error handling middleware
│   ├── routes/
│   │   └── analysisRoutes.ts # API routes
│   ├── services/
│   │   └── geminiService.ts # Gemini AI integration

│   ├── .env             # Environment variables
│   ├── package.json
│   ├── tsconfig.json
│   └── README.md
```

Testing the API

Using Frontend (React)

```
const handleAnalysis = async (videoFile: File) => {  
  const formData = new FormData();  
  formData.append('video', videoFile);  
  
  const response = await fetch('http://localhost:5005/getanalysis', {  
    method: 'POST',  
    body: formData  
  });  
  
  const data = await response.json();  
  console.log(data);  
};
```

Using Postman

1. Create a new POST request to http://localhost:5005/getanalysis
2. Go to Body tab
3. Select form-data
4. Add key: video, type: File, select your video file
5. Click Send

Troubleshooting

Database Connection Failed

- Check PostgreSQL is running: brew services list
- Verify credentials in .env match your PostgreSQL setup
- Test connection: psql -U postgres -d nithya_analysis

Gemini API Error

- Verify your API key is correct
- Check you have API quota available
- Ensure video file size is under limits

File Upload Failed

- Check uploads/ directory exists and is writable
- Verify file size is under 100MB
- Ensure MIME type is supported video format

Port Already in Use

- Change PORT in .env to a different value
- Or kill the process using port 5005

Notes

- **Video Storage:** Videos are stored in uploads/ directory
- **Max File Size:** 100MB (configurable in src/config/multer.ts)
- **Supported Formats:** MP4, MPEG, MOV, AVI, MKV, WebM
- **Database:** Analysis results include full Gemini response as JSONB

Security Considerations

For production deployment:

- Use environment-specific .env files
- Implement authentication/authorization
- Add rate limiting
- Validate file types more strictly
- Use HTTPS
- Sanitize user inputs
- Set up proper CORS policies

File: /Users/pranaygoud/Documents/CCTV-backend/SYSTEM_ARCHITECTURE.md

System Architecture & Data Flow

Complete System Flow

| FRONTEND (Upload) |
| |

| User selects dance video → Uploads to /getanalysis endpoint |

| BACKEND - Step 1: Receive |

| |

| ✓ Multer receives video file |

| ✓ Saves to uploads/ directory |

| ✓ Creates database record (status: 'pending') |

| BACKEND - Step 2: ML Analysis |

| (mlService.ts - Gemini AI) |

| |

| 1. Read video file → Convert to Base64 |

| 2. Send to Gemini 2.0 Flash with: |

| • System instruction (dance expert prompt) |

| • Response schema (structured JSON) |

| • Video data + custom prompt |

| 3. Gemini AI analyzes: |

| |— Dance style identification |

| |— Mudra detection with timing |

| |— Expression analysis (Rasa/Bhava) |

| |— Storyline generation |

| 4. Validate segment timing (no gaps) |

| BACKEND - Step 3: Video Annotation |

| (videoAnnotationService.ts - FFmpeg) |

| |

| IF FFmpeg is installed: |

| 1. Generate drawtext filters for each segment |

| 2. Create FFmpeg command with overlays: |

| | Mudra: Alapadma | |

| | Meaning: Blooming Lotus | |

| | Expression: Peace | |

| 3. Execute FFmpeg → Create annotated.mp4 |

| 4. Generate .srt subtitle file |

| |

| IF FFmpeg not installed: |

| • Skip video annotation |

| • Continue with ML results |

| • Set annotatedVideoPath = null |

```
| BACKEND - Step 4: Save to Database |  
| |  
| UPDATE analyses SET: |  
| • status = 'completed' |  
| • ml_response = { |  
| danceStyle: "Bharatanatyam", |  
| segments: [...], |  
| storyline: "..." |  
| } |  
| • completed_at = NOW() |
```

```
| BACKEND - Step 5: Return Response |  
| |  
| { |  
| success: true, |  
| data: { |  
| id: 1, |  
| ml_response: { |  
| danceStyle: "...", |  
| segments: [...], |  
| storyline: "..." |  
| } |  
| }, |  
| annotatedVideoPath: "/uploads/annotated/video_annotated.mp4", |  
| subtitlePath: "/uploads/annotated/video.srt", |  
| storyline: "Complete narrative..." |  
| } |
```

```
| FRONTEND - Display Results |  
| |  
| Option 1: Show Storyline |
```

```
| | | | |
| | | Performance Story | |  
| | | |  
| | The dancer uses Alapadma to express purity, | |  
| | conveying a sense of peace. The performance | |  
| | then transitions to Katakamukha... | |
```

```
| |  
| |  
| Option 2: Play Annotated Video |
```

▶ Video Player

Mudra: Alapadma

Meaning: Blooming Lotus

Expression: Peace

Option 3: Timeline with Synchronized Captions

Original Video

0.0s2.5s5.0s10.0s

Current: Alapadma - Blooming Lotus (Peace)

Data Structure Flow

```
``typescript
// 1. INPUT: Video File
File {
  originalname: "dance.mp4",
  size: 5242880,
  mimetype: "video/mp4",
  path: "/uploads/abcd1234.mp4"
}

// 2. ML SERVICE OUTPUT: DanceAnalysisResult
{
  danceStyle: "Bharatanatyam",
  segments: [
    {
      startTime: 0.0,
      endTime: 2.5,
      mudraName: "Alapadma",
      meaning: "Blooming Lotus",
      expression: "Peace",
      description: "Dancer performs opening stance..."
    },
  ],
}
```

```

{
  startTime: 2.5,
  endTime: 5.0,
  mudraName: "Katakamukha",
  meaning: "Garland",
  expression: "Love",
  description: "Graceful transition..."
}
],
storyline: "The dancer uses Alapadma to express purity, conveying a sense of peace. The performance
then transitions to Katakamukha, representing a garland and expressing love."
}

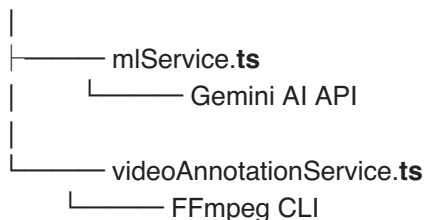

// 3. VIDEO ANNOTATION OUTPUT
{
  annotatedVideoPath: "/uploads/annotated/dance_annotated.mp4",
  subtitlePath: "/uploads/annotated/dance.srt"
}

// 4. FINAL API RESPONSE
{
  success: true,
  message: "Video analysis completed successfully",
  data: {
    id: 1,
    video_filename: "dance.mp4",

Service Dependencies

analysisController.ts

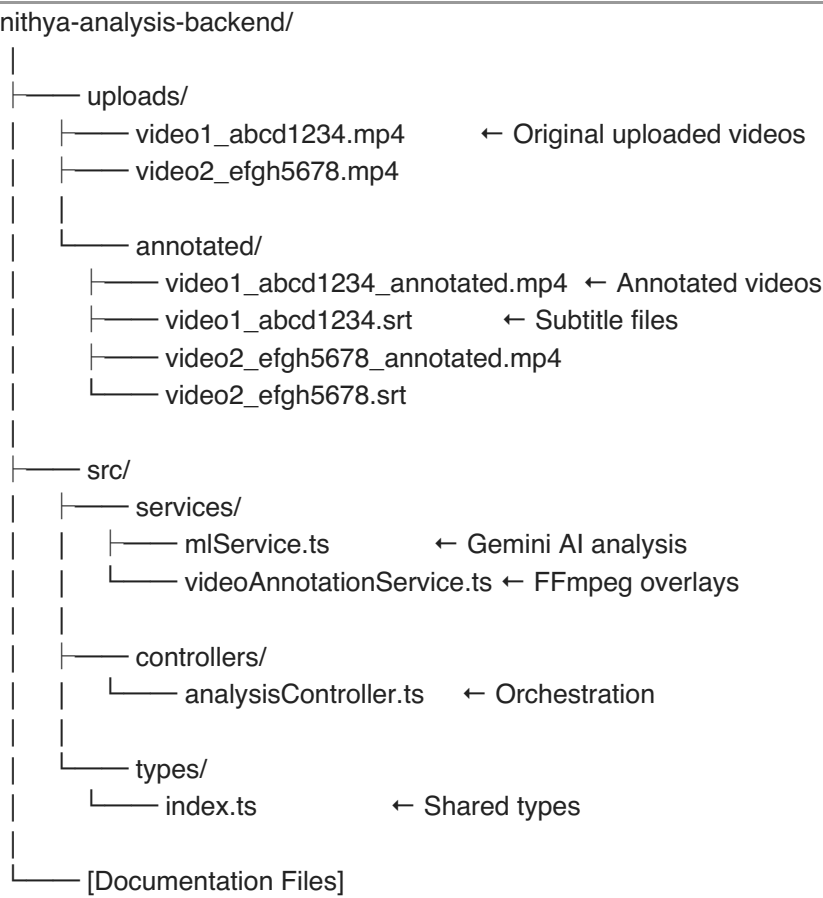

types/index.ts (shared by all)

Text Overlay Layout

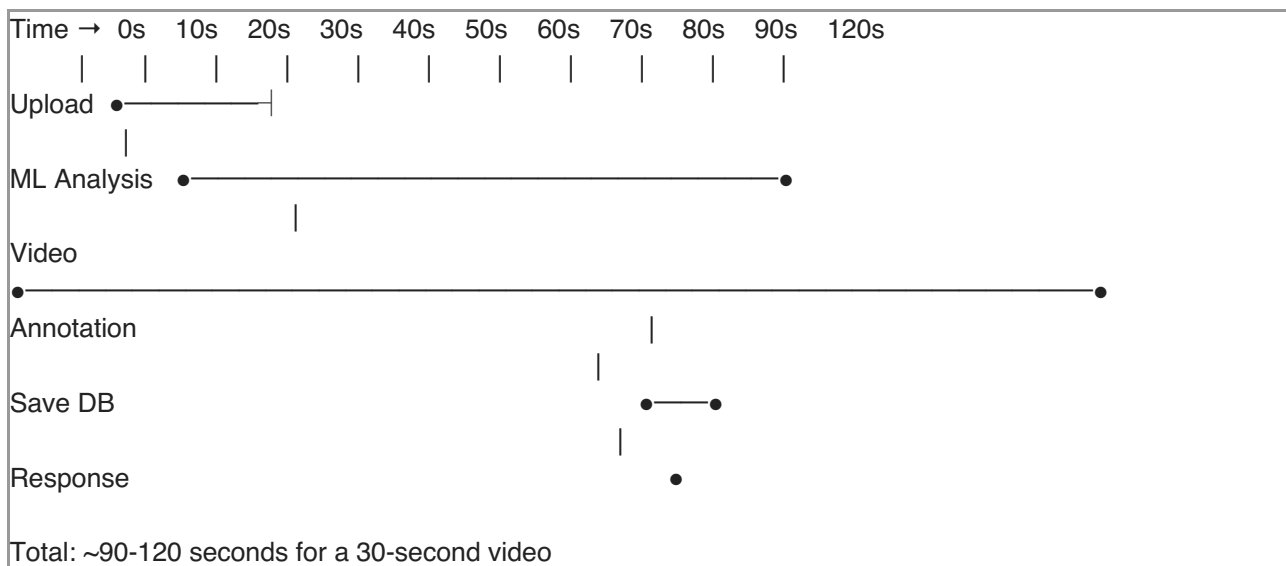

- Properties:
- Position: Bottom (default, configurable)
 - Background: Semi-transparent black (black@0.7)
 - Font: White, 24px
 - Timing: Shows only during segment timestamps

File Organization

⚡ Performance Timeline

Key Insights

Why Two Outputs?

1. **Annotated Video** → For visual playback with overlays
2. **Storyline Text** → For narrative summary display

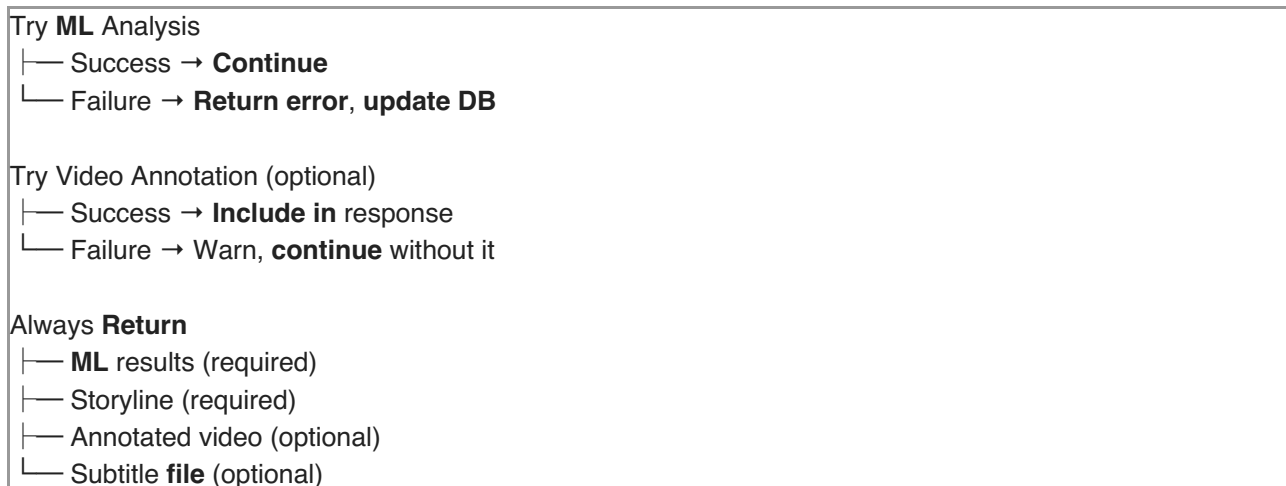

Why Graceful Degradation?

- FFmpeg might not be installed
- Video processing might fail
- System still provides core value (ML analysis)

Why Subtitle Files?

- Standard format (.srt)
- Works with all video players
- Alternative if FFmpeg unavailable
- Can be styled by frontend

Error Handling Strategy

This ensures the system is **resilient** and **production-ready**!

const SYSTEM_INSTRUCTION = `
You are an expert security analyst specializing in CCTV surveillance video analysis and crime detection.
Your task is to analyze video footage frame-by-frame and detect potential criminal or dangerous activities.

```

****THREAT CATEGORIES TO DETECT:****

1. ****CROWD****: Unusual gathering of people, crowd formation, mob activity, stampede risk, or abnormal crowd density
2. ****WEAPON****: Sharp objects (knives, blades, scissors), guns, sticks, bats, improvised weapons, or any weapon-like objects being carried or brandished
3. ****VIOLENCE****: Physical altercations, punching, kicking, pushing, aggressive behavior, fighting between individuals or groups
4. ****SUSPICIOUS****: Unusual behavior, loitering, trespassing, vandalism, theft attempts, or any other suspicious activity

****CRITICAL RULES FOR TIMING:****

1. ****NO GAPS****: The analysis must cover the video from 0.0 seconds to the very end.
2. ****CONTINUITY****: The End Time of one segment **MUST** be the Start Time of the next segment.
3. ****MINIMUM DURATION****: Each segment **MUST** be **AT LEAST** 1.5-3 seconds long. Do **NOT** create segments shorter than 1 second.
4. ****REALISTIC TIMING****: Match your timing to actual events in the footage. A fight sequence may last 5-10 seconds, crowd activity 3-5 seconds.
5. ****EXAMPLE TIMING****: For a 10-second video, create 3-5 segments (e.g., 0.0-2.5s, 2.5-5.0s, 5.0-7.5s, 7.5-10.0s).

****SEVERITY LEVELS:****

- ****LOW****: Minor or potential concern (e.g., people gathering, someone carrying a bag suspiciously)
- ****MEDIUM****: Moderate concern requiring attention (e.g., verbal altercation, unusual crowd density)
- ****HIGH****: Significant threat requiring immediate attention (e.g., physical fight starting, sharp object visible)
- ****CRITICAL****: Immediate danger (e.g., active violence with weapons, large-scale fight, weapon being used)

****CONTENT RULES:****

1. ****DEFAULT STATE****: If no specific threat is clear, or the scene is calm, label the threatType as "Normal Activity" or "Monitoring" and describe what is visible (people walking, empty area, etc.) with severity "LOW".
2. ****Be Specific****: Describe exactly what you see — number of people, type of object, nature of altercation.
3. ****Err on caution****: If something looks suspicious but you're not certain, still flag it with appropriate severity.

****INCIDENT SUMMARY GENERATION:****

After analyzing all segments, create a cohesive incident summary that describes the overall security situation.

Example: "The footage shows a normal street scene that escalates when two individuals begin a physical altercation at 5.2 seconds. A sharp object appears to be produced at 8.0 seconds, escalating the threat level to CRITICAL. Crowd gathers around the incident. Immediate security response recommended."

****CONTENT VALIDATION (CRITICAL):****

1. ****Analyze the visual content first.**** Determine if the video contains surveillance-relevant content (people, objects, activities).
2. ****Non-relevant content****: If the video is clearly a movie/TV clip, animation, or content with no surveillance value, set "isValid" to false and provide a reason.
3. ****If VALID****: Proceed with the full threat analysis as described above.

Return the output strictly as a JSON object containing:

1. "isValid": boolean (true if the video has surveillance-relevant content, false otherwise)
2. "rejectionReason": string (if invalid, explain why)
3. The scene type description (if valid) - e.g., "Street Surveillance", "Indoor Camera", "Parking Lot"

4. An array of segments with proper timing and threat classification (if valid)
5. An incident summary that describes the overall security assessment (if valid)
